

## **The Best of Both Worlds: Integrating Dynamics NAV and SharePoint**

The powerful features offered by Dynamics NAV and SharePoint can be integrated to allow the two systems to “talk to each other”. By linking the two systems with each other, they work together to produce increased business benefits and the value and tools offered by each system are enhanced even further.

Achieve greater business success by integrating Dynamics NAV and SharePoint together into one powerful, fully featured system. Gain the control and visibility offered by Dynamics NAV enhanced with the collaboration and connectivity tools SharePoint offers your employees.

## How do Dynamics NAV and SharePoint integrate?

- NAV 2013 includes the new web and SharePoint clients allowing users to carry out their day to day duties from any compatible web connected browser and from within their intranet site.
- The configurable nature of NAV allows specific, focused, live data to be displayed and edited (with permissions) anywhere in SharePoint where a web-part can be added.
- SharePoint and NAV use the same Active Directory (AD) integration meaning that AD can be used to control access rights in both systems.
  - SharePoint based Customer and Supplier portals can safely and securely show live data from NAV such as balance, contact information and orders. Customers would be able to place orders or service requests as well as obtain statements and copy invoices.
  - The new NAV 'Employee Lounge' is a suite of SharePoint based utilities for employees to post self-service items such as timesheets and expenses.
  - Incoming documents, emails, scanned correspondence and NAV documents can be archived in SharePoint document libraries with customer, vendor and document tags. As well as being accessible from NAV, non NAV users can find these documents using SharePoint's powerful Enterprise Search facilities.
- Using Microsoft SQL Server™, powerful reporting and database level integrations can be performed across SharePoint, NAV and other systems whilst providing robust failover and disaster recovery, ensuring your data is safe and secure.
- Reporting Services and the new PowerView features available in SQL Server 2012 allow powerful interactive business reporting within a SharePoint site.
- Flexible NAV Web Services allows for further integration with SharePoint workflows and bespoke development such as 'Find Your Nearest Store'.
- SharePoint 'Content Managed' websites can pull customer, product and complex pricing calculations directly from NAV.
- Reduced IT costs by avoiding data and business logic duplication across disconnected systems.
